Esbjerg, July 2020

Florida Pompano RAS startup Aquaco announces selection of Alpha Aqua A/S as key technology and systems provider for a major RAS production expansion.

EXCEPTIONAL FISH MARKET

Joe Cardenas, CEO at Aquaco, continues to develop his vision for a one million pound per year Florida Pompano RAS production facility in Ft. Pierce, Florida. Working with his COO Dan Farkas and the Aquaco team, Joe has demonstrated at their pilot nursery and growout facility that RAS production of the high value Florida strain of pompano is practical, efficient and reliable. With current production at about 2,000 pounds per week, the market for their fish is exceptional. And the local chefs are inspired to create signature dishes that spice up their menus.

On a similar technology development trajectory, Alpha Aqua A/S was formed several years ago in Denmark. Alpha Aqua A/S has designed and is now manufacturing the Alpha Line™, an advanced integrated RAS growout system based on decades of Nordic and other global RAS experience.

The impressive Alpha Line™

The Alpha Line™ production modules are pre-manufactured, factory tested, containerized, and shipped for easy, rapid installation and startup.

”...We are totally delighted to be selected by Aquaco to take on this critical role in their aquaculture facility development.

We recently announced our plans to establish project delivery services in North America. This is our first project in the U.S. and thus will be a flagship project for Alpha Aqua A/S’, Ramon Perez, COO at Alpha Aqua A/S said.

‘FISH IN THE WATER’ IN 2021

Dan Farkas said, “Facilities, infrastructure and aquaculture system planning, design and construction are an integral part of our Ft. Pierce facility operations. Our in-house production and facilities development team has been instrumental in the RAS technology vetting and selection process. We are looking forward to having ‘fish in the water’ the second half of 2021.”
